SUMMARY

Software Engineer with a strong foundation in building full-stack web applications, from frontend to backend to database, and a genuine interest in writing clean, maintainable code. Comfortable working across the entire development lifecycle and quick to pick up new tools and technologies as needed. Passionate about solving real-world problems through code and building applications that are functional, reliable, and genuinely useful to the people who use them. Looking for a Software Engineer or Full Stack Developer role where I can keep learning, take ownership of my work, and grow into a well-rounded engineer as part of a strong team. **CORE COMPETENCIES**

Full-Stack Web Development	REST API Design & Integration	JWT Authentication & Authorization
Frontend Engineering (React.js)	Backend Engineering (Node.js / Express.js)	Database Design (MongoDB & MySQL)
Web Auditing (Lighthouse, Puppeteer, Cheerio)	SEO & Accessibility Optimization	Performance Optimization & Core Web Vitals
Version Control (Git/GitHub)	Agile Collaboration & Debugging	Software Testing & QA

TECHNICAL SKILLS

Languages: JavaScript, Python, Java, HTML5, CSS3

Frontend: React.js, Responsive Design, Component-Based Architecture

Backend: Node.js, Express.js, REST API Development, JWT Authentication

Databases: MongoDB, MySQL, Schema Design & Normalization

Web Auditing & Automation: Lighthouse, Puppeteer, Cheerio, SEO Analysis, Accessibility Testing, Core Web Vitals

Tools & Platforms: Git, GitHub, Postman, VS Code, Vercel, Netlify, Render

Practices: Agile/Scrum, Debugging, Software Testing, SDLC

PROFESSIONAL EXPERIENCE

Software Engineer Intern | Success Ladder Technologies Pvt. Ltd

- Contributed as a full-stack engineer to a Website Audit Tool evaluating the SEO, accessibility, performance, and security posture of client websites, building reusable React.js components and REST API endpoints in Node.js/Express.js to trigger audits and serve reports.
- Integrated Google Lighthouse programmatically to capture Performance, Accessibility, Best Practices, and SEO scores, along with Core Web Vitals metrics such as FCP, LCP, and CLS.
- Used Puppeteer for automated crawling and responsiveness testing, and server-side HTML parsing to extract meta tags, headings, Open Graph tags, and schema markup for SEO analysis.
- Implemented broken-link and meta-information validation, designed MongoDB schemas to persist audit history and reports, and collaborated with the team using Git/GitHub within an Agile workflow.

PROJECTS

Website Audit Tool | Industry Project

Tech Stack: React.js, Node.js, Express.js, MongoDB, Lighthouse, Puppeteer, Cheerio, REST APIs

- Contributed to the architecture of a full-stack website auditing platform combining SEO, accessibility, performance, and security analysis into a unified dashboard experience, with each analysis type built as an independent, composable service callable via REST API.
- Worked on an AI Visibility Score module to assess how discoverable and well-structured a site's content is for AI-driven search and indexing.

- Built schema markup, Open Graph, and meta-tag validation features to check structured data and social metadata against bestpractice standards, along with broken-link detection to surface technical SEO issues automatically.
- Developed mobile responsiveness testing to render pages across multiple viewport sizes and flag layout or usability issues.
- Contributed to the audit report generation flow and built dashboard views to visualize Core Web Vitals, Lighthouse scores, and audit history in an accessible, easy-to-scan interface.

🕒 Book Buddy | AI-Powered Reading & Study Companion

Tech Stack: *React.js, Node.js, Express.js, MongoDB, LLM API (OpenAI/Gemini)*

- Designed and built Book Buddy, a full-stack MERN application that lets users upload books and receive concise, chapter-wise summaries instead of reading full-length text.
- Built a document-processing pipeline in Node.js to parse uploaded books, detect chapter boundaries, and structure content for downstream summarization.
- Integrated a large language model API to generate chapter-wise summaries and power an MCQ generation feature, letting students upload study material and receive auto-generated multiple-choice questions for self-practice.
- Designed REST API endpoints in Express.js to handle book uploads, trigger summarization/MCQ workflows, and return processed results to the frontend, paired with a React.js interface for uploading books, reading summaries, and attempting MCQs.
- Used MongoDB to store uploaded book metadata, generated summaries, and MCQ sets for retrieval across user sessions, serving both casual readers and students within one product.

🕒 TaskNova | Academic Task Management Platform

Tech Stack: *React.js, Node.js, Express.js, MongoDB, MySQL*

- Designed and built a full-stack task management platform to help students organize academic work through a Kanban-style workflow.
- Implemented JWT-based authentication and authorization to secure user sessions and protect task data across the application.
- Built a priority scoring system that ranks tasks based on deadlines and importance, and a Kanban dashboard in React.js supporting task movement across customizable status columns.
- Implemented task reminder functionality to notify users of upcoming deadlines, and designed REST API endpoints in Node.js/Express.js for task CRUD operations, authentication, and progress tracking.
- Structured data models across MongoDB and MySQL to separate flexible task metadata from relational user and progress records, and deployed the application end-to-end with configured environment variables and hosting

🕒 Smart Meal Planner | Personalized Nutrition & Diet Planning Application

Tech Stack: *Flask, Python, JavaScript, MongoDB, MySQL*

- Built a personalized meal recommendation application that generates diet plans based on individual user metrics.
- Implemented BMR (Basal Metabolic Rate) and TDEE (Total Daily Energy Expenditure) calculation logic in Python, factoring in activity level and lifestyle inputs to estimate each user's caloric needs.
- Designed a recommendation engine that maps calculated caloric targets to suggested meals and portion guidance.
- Built REST API endpoints using Flask to serve meal recommendations and user profile data to the frontend.
- Used MongoDB to store flexible meal and nutrition data and MySQL to manage structured user profile records, with a JavaScript frontend to collect user inputs and present personalized diet plans in a readable format.

🕒 Student Management System | CRUD-Based Records Application

Tech Stack: *HTML, CSS, JavaScript, MySQL*

- Built a CRUD-based web application to manage student academic records, including creation, viewing, updating, and deletion of entries.
- Designed a normalized MySQL database schema to eliminate data redundancy and maintain referential integrity across student records.
- Implemented search functionality allowing quick lookup of student records by key identifiers.
- Built update and delete workflows with client-side validation to prevent malformed or incomplete data submissions.
- Structured the frontend using HTML, CSS, and JavaScript to deliver a clean, functional interface for record management.
- Wrote SQL queries to handle relational data operations directly against the MySQL database.

EDUCATION

B.Tech in Computer Science & Engineering

MITRC Alwar, Bikaner Technical University | 2023 – 2027

Senior Secondary (Class 12)
RBSE (Rajasthan Board) | 2023

Secondary (Class 10)
RBSE (Rajasthan Board) | 2021

CERTIFICATIONS & TRAININGS

Full Stack Web Development Training

- Completed a structured certification covering end-to-end web application development, including frontend, backend, and database integration.
- Gained hands-on practice with REST API design, authentication mechanisms, and deployment workflows.

Cloud & DevOps Fundamentals

- Learned core Git/GitHub workflows for version control and collaborative development.
- Studied CI/CD concepts and cloud deployment fundamentals through applied exercises.

Advanced Java Programming

- Strengthened core Java concepts including object-oriented programming, collections, and exception handling.
- Practiced writing structured, maintainable Java code through applied programming exercises.
